## Skills

---

- Javascript | Typescript | Python | Golang | PostgreSQL | MongoDB | Node | Express | React | Next.JS | React - Native | Expo | Tailwind CSS | Bootstrap | Shadcn ui | Django | Fiber
- DigitalOcean | Hostinger | OOP | Frontend | Backend | Full-Stack Development | Mobile Development

## Experience

---

### Lead Mobile Developer (Contract)

January 2023 - Present

*Soomar @ Somalia*

- Build Soomar's flagship mobile shopping app using React Native Expo for both iOS and Android
- Developed clean, performant UI/UX and integrated robust backend functionality
- Created RESTful APIs in Next.JS to power app features like products, carts, orders, etc
- APIs also support Soomar's internet services platform for other businesses
- Act as a lead mobile developer, handling new features, fixes, optimizations, and code reviews
- Work remotely while communicating daily with product and engineering teams
- Continuously improve the app based on user analytics, testing, and market feedback
- Research and implement the best security, performance, and developer practices

### Freelance Full Stack Developer

February 2019 - Present

*Centre for Research and Integrated Development (CeRID) @ Somalia*

- Designed and developed 4 responsive websites for CeRID's various programs and initiatives
- Built a custom school management system (SMS) as their main education platform
- The SMS allows administration of student records, attendance, online payments, grading, and reporting
- Technologies used include TypeScript, PostgreSQL, JavaScript frameworks like React/Next.JS
- Work remotely to provide ongoing maintenance, new features, and technical support for all systems
- Collaborate closely with client teams to continually refine systems based on evolving needs
- Research and implement optimization, security, and performance best practices
- Act as the primary developer contact for any technical or development-related queries

### Lead Full Stack Developer

July 2018 - Present

*Yardimeli Specialist Hospital @ Somalia*

- Single-handedly developed and maintained the main hospital website using front-end and back-end technologies
- Designed and implemented a custom attendance management software for staff tracking and scheduling
- Built and oversaw the maintenance of an HR system for employee records, payroll, and benefits administration
- Developed a blood bank software to streamline donor recruitment, inventory, and transfusion management
- Utilize technologies like Python, Django, PostgreSQL, JavaScript & familiar frameworks for application development
- Act as a primary in-house developer, handling new features, integrations, updates, and bug fixes
- Provide technical support and guidance to clinical and administrative staff on software usage
- Continuously research and implement best practices to improve code quality, performance, and security

## Education

---

**Bachelor of Computer Science**

*Plasma University @ Somalia*

**July 2012 - July 2016**

## Projects

---

- **Sahal Book:** A multi-tenant accounting software package designed for small and medium businesses worldwide.
- **Soomar App:** A flagship mobile application that modernized Soomar's e-commerce experience on the go.
- **Wadaag App:** Ultimate super app combining transportation, rentals, and e-commerce for all Somali needs.
- **Kinyozi App:** Based in East Africa, the Kinyozi app has helped barbers better serve local communities, and customers conveniently book appointments through its mobile-first platform optimized for the region.
